

## **LOOKING FOR VEHICLE INFORMATION**

*Posted September 7, 2019*

There was a single vehicle incident on Range Road 70, just off of Hwy 523, where a truck ran through a barbed wire fence and into an electric fence that surrounds a tree-growing field, significantly damaging both fences. Pieces of the truck were broken off after impact, and left laying in the ditch and on the roadway. The attending officer seized a driver's side headlight, a fender flare and countless shards of plastic. RCMP were able to identify that the headlight came off of a Chevrolet or GMC truck, probably a 2007-2009 model year, and that the truck is white, as is the fender flare that was picked up.

Please be on the lookout for a white GMC or Chev truck, possibly model year 2007-2009, that is missing a driver's side headlight, driver's side front fender flare, and most likely has further damage to the front bumper and front fender on the driver's side. If the vehicle is spotted, either parked or driving, please advise RCMP of its location or owner information, if the latter is known. A licence plate would be good as well. We are wanting to speak with the registered owner, and/or driver of that vehicle.
